

ABSTRACT

A belt mounted ID/credit card anti-theft device for securely holding at least one such card.

The device comprises a first rectangular body and a second elongate body. The first

5 rectangular body includes a chamber adapted for receiving and securely holding the card. The second elongate body comprises means for demountably mounting the first rectangular body to a belt or strap and means for sealing the card securely within the chamber in a locked

configuration. Another embodiment of the invention is disclosed wherein the rectangular body comprises a first front card holding chamber and a second rear card holding chamber. Various

10 devices for attaching the device to a belt or strap are also disclosed.
